

PLANT PROTECTION:

Planting which is completed to meet requirements of this *Mitigation Plan* should be protected against damages which may be caused by deer, beaver, or other varmints which can damage plants. This damage could have a devastating impact on survival rates which are required under this permitting.

Several methods of protection against these potential damages are available. One is a wireless deer fence. Another is a plastic sleeve which can be placed around the plant. Information on these two products is attached. Other alternatives are the use of coyote urine or other commercial products available for this application. These products and applications all require periodic maintenance or re-application

Jack A. Hamilton & Associates, Inc. is not a plant specialist or horticulturist. An expert in these matters should be contacted prior to and during the establishment of mitigative growing areas. The attached information is provided as a courtesy to our clients.
